The center is getting ready to provide world class cancer treatment facilities starting from preventive to palliative care under one roof. Apollo Hospitals Dhaka, has installed a high-end fully loaded Radiotherapy machine, LINAC HD -VERSA Signature model. Being the first of its kind in Bangladesh, the machine is fitted with a six dimensional rotation couch known as HEXA POD and is programmed to deliver radiation doses to tumors with pinpoint accuracy from any angle. HD VERSA, as the name suggests, has versatile properties and is capable of treating tumors in either a basic conventional form or the most advanced form of therapy “stereotactic radiotherapy”. Our ultramodern radiotherapy unit is managed by well-known professionals in the field of oncology from both home and abroad.

The center is also equipped with an ultramodern HDR Brachytherapy (treatment of cancer by the insertion of radioactive source directly into the body cavity and tissues) unit “FLEXITRON” which houses Cobalt 60 as a radiation source thus ensuring uninterrupted treatment due to the long half-life of the source.

To provide the best possible treatment, our experts in the related fields debate, deliberate and discuss regarding the patient diagnosed with cancer in MDT ‘tumor board’. Our experts then decide the best form of treatment for each and every patient based on solid scientific evidence.

Brachytherapy
FLEXITRON

Diagnostic Oncology is the most vital part and core to all world class cancer centers, without which the very existence of such departments cannot even be dreamt of. Our Onco-pathology team is armed with the most cutting-edge technologies to provide swift, sharp and accurate diagnosis whenever needed. The department is complemented by IHC (immuno-histochemistry), serum tumor markers, along with molecular onco-pathology and flow cytometry to count a few.

To add on to its already existing armamentarium, Apollo Hospitals Dhaka proudly announces that our most advanced PET-CT machine has recently been installed, which provides cutting-edge technology to stage, plan, manage and monitor the treatment of the tumor or tumors in question.

The symptom management team of ours are the best in Bangladesh and always stand ready to make our patient's life free of pain and suffering from the uncontrollable yet unwanted symptoms of cancer, thus "adding life to years".
